

Germany

Sebastian Lemansky

2024

Task

- If the US provided aid to Germany, in what amount (in USD) and what area would aid provide the most national stability?

Executive Summary

- Based on known information regarding Germany's current standings and situations they will remain stable in the next 3 years with the provided aid from the United States. Although the alarming rise of the Alternative for Germany (AfD) has been a cause for concern for the past couple of months, the Prime Minister and other government officials are doing their best to suppress and denounce the wrongful acts of the AfD. Relations with foreign countries are currently under discussion. With China being the main economic partner to Germany they are stuck being dependent on China's economy and cooperation with Germany. As with Russia, Germany currently supports Ukraine in the Russia-Ukraine War leading to negative relations with Russia. The economy is currently balancing between unstable and stalled due to the energy crisis, although Germany is making changes to slowly fix the depression that they are in. The US funding should be directly focused into supporting Germany's economy and social instability though pushing Germany's clean energy and any remaining funds should go to help the social and political issues in Germany.

Political Overview

- Federal parliamentary republic
- The executive branch is made up of the chancellor who is elected by the Bundestag and formally appointed by the president of Germany and the cabinet ministers
- Chancellor Olaf Scholz and 16 federal ministers
- Federal legislative power is divided between the *Bundestag* and the *Bundesrat*. The *Bundestag* is directly elected by the German people, while the *Bundesrat* represents the governments of the regional states.
